

Other specialties

Welding ribbons

Specific ribbons for brazing applications (special alloys: tin, indium, ...).

Tapes for masking

Tapes of different widths for protecting parts of circuit boards during welding and brazing and high temperature applications.
Savings masking depositing on the card in order to protect files holes and connectors of the weld during the passage of the wave.

Dispensers

Dispensers empty or pre-filled in the form of pens and bottles designed to deposit small quantities of liquids such as controlled soldering flux, solvents, oxidants, etc..

Tool for welding

Antistatic and anti-scratch hand tools, solvent resistant and to soldering temperatures, allows positioning, crimping, bending and hold the components during soldering or gluing.

Lead check

Lead Check test kit to quickly and easily control the presence or absence of lead on surfaces of components and brazed surfaces in general.

Analysis of solder baths

Metallurgical analysis of sample weld (detailed report of impurities levels)

Salt tinning

S1115

For tinning application or roller.

Wax

M95

For wave soldering machine.
